

Water Recycling Unit

Product Description

NES Worldwide Inc. (NES) Water Recycling Unit (WRU) is designed to work in conjunction with both conventional and Computer-to-Plate (CTP) plate processors as a stand-alone source of rinse water.

Environmental Benefits

The WRU is designed for applications where minimizing water consumption and/or waste effluent are of primary concern. By utilizing a self-contained, closed loop system the customer can recycle, control and monitor all water usage from the plate processing operation. This unit is also useful in applications where direct access to building plumbing is limited or non-existent.

Applications

The WRU is intended for use with conventional and CTP plate processors. For processors built or remanufactured by NES, plug-in and quick connect fittings provide for fast and convenient setup.

Water Recycling Unit

Specifications

Model	Weight	Capacity	Filter	Power
WS 15	40 lbs.	15 gallons	20 micron, 10", polywound	220/240v 50/60hz 0.7 fla (115v option available)

Installation

Electrical connection to an NES manufactured or remanufactured processor is via a plug-in connection. Connection to other processors requires a qualified technician to splice into power from the water rinse solenoid circuit. Plumbing connections are made via feed/drain hoses, clamps and fittings that are provided with the unit.
